As a Prime Minister from Hiroshima, I believe that we must take every realistic measure towards a world without nuclear weapons step by step, however difficult the path may be.

The very starting point of this endeavor is the NPT. The NPT has served as the cornerstone of the international nuclear disarmament and non-proliferation regime in realizing international peace and security.

Maintaining and strengthening the NPT regime is in the interest of the entire international community. Let us join forces to achieve a meaningful outcome at this Conference. Together with all of delegates concerned here today, Japan is determined to firmly uphold the NPT as its guardian.

1. Introduction

Your Excellency Mr. President, Excellencies, Distinguished Delegates,

Today, I have come to this Review Conference driven by a strong sense of urgency.

As Foreign Minister, I attended the 2015 Review Conference in New York, as the first Japanese premier to attend an NPT Review Conference. In a speech delivered at the general debate, he expressed Japan’s strong determination to work together with other state parties to firmly uphold the NPT as one of its guardians.

As the first action, I call for a shared recognition on the importance of continuing the record of non-use of nuclear weapons. We should never tolerate the threat of the use of nuclear weapons, such as that made recently by Russia, let alone the use of nuclear weapons. We must ensure that Nagasaki remains the last place to suffer an atomic bombing.

The second action is to enhance transparency. Transparency is the foundation of all nuclear disarmament measures. I call on all nuclear-weapon States to disclose information regarding the use of nuclear energy or on current stockpiles of fissile materials. This is an important step to gather momentum for the commencement of negotiations on an FMCT.

The third action is to maintain the decreasing trend of the global nuclear stockpile. While the number has significantly decreased since the peak of the Cold War, there are still more than ten thousand nuclear weapons in the world. Maintaining this decreasing trend is extremely important in getting closer to a world without nuclear weapons.

To achieve this, I call on all nuclear-weapon States to engage in a responsible manner. In this vein, Japan supports the dialogue conducted between the United States and Russia for further reduction and encourages the US and China to engage in a bilateral dialogue on nuclear arms control and disarmament.

We should breathe new life into the discussions on the CTBT and an FMCT. In order to build momentum towards facilitating the entry into force of the CTBT, I will convene a meeting of the CTBT Friends at the leader’s level during the United Nations General Assembly in September. I reiterate our call for the immediate commencement of negotiations on an FMCT.

The fourth action is to secure nuclear non-proliferation and promote the peaceful uses of nuclear energy upon that basis. While there are concerns about the possibility of another nuclear test, Japan will address North Korea’s nuclear and missile issues in coordination with the international community.

The return to compliance with the Iran nuclear agreement is also yet to be realized. Japan will contribute proactively towards facilitating dialogue. The peaceful uses of nuclear energy should go hand in hand with nuclear safety. The recent attacks on nuclear facilities by Russia must not be tolerated. Building on the lessons learned from the 2011 accident, Japan will continue to reconstruct the affected areas and address various challenges associated with decommissioning of the nuclear power stations. In close cooperation with the international community, including the IAEA, Japan will continue to advance its efforts in a transparent manner in accordance with domestic and international safety standards.

For the fifth action, Japan will promote the accurate understanding on the realities of nuclear weapons use to the world. We will work on the “Hiroshima Action Plan” to reconstruct the affected areas and address various challenges associated with decommissioning of the nuclear power stations. In close cooperation with the international community, including the IAEA, Japan will continue to advance its efforts in a transparent manner in accordance with domestic and international safety standards.

For the fifth action, Japan will promote the accurate understanding on the realities of nuclear weapons use to the world. We will work on the “Hiroshima Action Plan” to reconstruct the affected areas and address various challenges associated with decommissioning of the nuclear power stations. In close cooperation with the international community, including the IAEA, Japan will continue to advance its efforts in a transparent manner in accordance with domestic and international safety standards.

2. Thoughts towards the NPT Review Conference

Nevertheless, giving up is not an option.

2. Thoughts towards the NPT Review Conference

Nevertheless, giving up is not an option.
The Atomic Bomb Dome received the full force of the blast as it lay just around 160 meters away from the bomb epicenter. Despite most of the building interior having burned down, its outer structure has been preserved almost intact, appearing as it was immediately after the bomb exploded. The Hiroshima Peace Memorial Park, where this World Cultural Heritage site is located, is adorned throughout with paper cranes, which are considered symbols of peace.

through encouraging visits to Hiroshima and Nagasaki by international leaders and others. In this connection, I welcome the visit by Secretary General Antonio Guterres to Hiroshima on August 6. Japan shall make a contribution of ten million dollars to the United Nations in order to set up a “Youth Leader Fund for a world without nuclear weapons.” By inviting future leaders to Japan and providing them with opportunities to learn firsthand the realities of nuclear weapon use, this will create a global network among the youth towards the elimination of nuclear weapons.

4 Conclusion
In order to build global momentum towards a world without nuclear weapons, I decided to hold the first meeting of the new “International Group of Eminent Persons” on November 23 in Hiroshima, which will enjoy the involvement of former and incumbent political leaders of the world. Mr. President, In 2023, Japan will host the G7 Summit in Hiroshima. It is my intention to demonstrate our firm commitment from Hiroshima to never repeat the catastrophe of atomic bombings.

Today, I have fold a paper crane and brought it with me here. SASAKI Sadako, the girl whose image served as the model for the Children's Peace Monument in the Hiroshima Peace Park, kept folding paper cranes, wishing to live. Today, paper cranes have come to symbolize worldwide prayers for peace and a world without nuclear weapons. I will make steps towards a world without nuclear weapons together with all the people who share the common aspiration around the world.

Thank you.

PRAYING FOR PEACE WITH PAPER CRANES

In Hiroshima City, located in western Japan, one can find a bronze statue holding a crane up to the sky, with arms earnestly outstretched. The monument, which has been standing for over half a century now, was modeled after a girl named Sadako. On August 6, 1945, when the atomic bomb was dropped on the city, 2-year-old Sadako was at her home just 1.6 km or so from the hypocenter. Although the blast wave threw her outside, she suffered no external injuries. Sadako grew up to be an athletically inclined young girl who dreamed of becoming a physical education teacher. But in the autumn of 1954, when she was 11 years old, signs of illness started to emerge in her body. Lumps whose cause was unknown formed on her neck and behind her ears, and her face became swollen. In February the following year, she was diagnosed with leukemia, one of the causes of which was thought to be the aftereffects of radiation exposure. Her parents were informed that she had “one year at the most.”

After Sadako was hospitalized, friends who visited her said that she fretted about whether she would be able to keep up with schoolwork after being discharged. No one told her what she suffered from. The illness progressed and purple patches started spreading over her legs. While undergoing grueling treatment, Sadako became captivated by the colorful paper cranes that were delivered to the hospital to wish for the recovery of patients. She became so engrossed in folding them that she churned out some 1,000 cranes in less than a month. The cranes, sometimes made of the paper used for wrapping medicines, gradually became smaller in order to save paper, which was so precious at that time. Each crane carried Sadako’s prayers to get well, and she would not stop folding them even after becoming unable to walk on her own. Her condition did not improve, however, and in October 1955, she passed away peacefully, surrounded by her family. She was just 12 years old. Sadako’s death initiated a movement to erect a monument to remember and pray for the children who had died from the bomb and its effects, and to achieve world peace. In 1958, the Children’s Peace Monument, modeled after Sadako, was completed in Hiroshima City. Through novels, picture books, and many other such means, Sadako’s story has been told to the world, and the paper crane is now widely known as a symbol of peace. Even today, about 10 million paper cranes a year are brought and sent from within and outside Japan as offerings to the monument.

HOW TO MAKE A PAPER CRANE

1. Prepare a square sheet of paper and fold it in half diagonally.
2. Fold it in half diagonally again.
3. Lift up the top layer of the triangle from the bottom edge and flatten it to make a square.
4. Open up the triangle by lifting the bottom layer up and flatten it to make a square.
5. Slightly open up one side and pull the crane up. Then fold inward. Do the same for the other side.
6. Reverse fold the end of one side to make the head, and pull the wings down.

Finished!
